

Technology Assessment for the Future Aeronautical Communications System

Filesize: 2.89 MB

Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, altered the way I believe.

(Prof. Loyce Runolfsson Jr.)

TECHNOLOGY ASSESSMENT FOR THE FUTURE AERONAUTICAL COMMUNICATIONS SYSTEM

To save **Technology Assessment for the Future Aeronautical Communications System** eBook, remember to refer to the button under and download the file or get access to other information which are in conjunction with **TECHNOLOGY ASSESSMENT FOR THE FUTURE AERONAUTICAL COMMUNICATIONS SYSTEM** book.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 272 pages. Dimensions: 9.7in. x 7.4in. x 0.6in. To address emerging saturation in the VHF aeronautical bands allocated internationally for air traffic management communications, the International Civil Aviation Organization (ICAO) has requested development of a common global solution through its Aeronautical Communications Panel (ACP). In response, the Federal Aviation Administration (FAA) and Eurocontrol initiated a joint study, with the support of NASA and U. S. and European contractors, to provide major findings on alternatives and recommendations to the ICAO ACP Working Group C (WG-C). Under an FAAEurocontrol cooperative research and development agreement, ACP WG-C Action Plan 17 (AP-17), commonly referred to as the Future Communications Study (FCS), NASA Glenn Research Center is responsible for the investigation of potential communications technologies that support the long-term mobile communication operational concepts of the FCS. This report documents the results of the first phase of the technology assessment and recommendations referred to in the Technology Pre-Screening Task 3. 1 of AP-17. The prescreening identifies potential technologies that are under development in the industry and provides an initial assessment against a harmonized set of evaluation criteria that address high level capabilities, projected maturity for the time frame for usage in aviation, and potential applicability to aviation. A wide variety of candidate technologies were evaluated from several communications service categories including: cellular telephony; IEEE-802. xx standards; public safety radio; satellite and over-the-horizon communications; custom narrowband VHF; custom wideband; and military communications. This item ships from La Vergne, TN. Paperback.
