Excerpt:  $(n-3)$ -way locus together with the  $002$  of tangent planes, viz. and so on. Each of these different classes of  $oo\ 1$  elements satisfying the Pfaffian equation will be denoted by the symbol  $M, l$ ; each will form a manifold of united elements with  $(n-1)$  degrees of freedom. Thus, when  $n = 2$ , that is, in two-dimensional space, the elements are the points with the straight lines through the points. The symbol  $Ml$  will now denote either an infinity of points on some curve together with the corresponding tangents to the curve; or a fixed point with the infinity of straight lines through the point; either of these infinities of elements will satisfy the Pfaffian equation In three-dimensional space there are  $Q05$  elements consisting of points with the planes through them. The symbol  $M2$  will now denote one of three  $002$  sets of united elements, viz. (1) the points of any surface with the corresponding tangent planes; (2) the infinity of points of any curve together with an infinity of tangent planes passing through each point of this curve; (3) the  $002$  of planes passing through any fixed point; the elements of any one of these three sets will satisfy the Pfaffian equation 156. We must now consider Lie s definition of an integral of a partial differential equation of the first order; and we need only take the case where the equation is homogeneous, and the dependent variable does not explicitly occur; for any...
