RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 122 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1821 Excerpt: . . . shew the interchange of elements that takes place in the case of adding a solution of potassa to protochloride and perchloride of mercury. 1 proportional of protoxide of mercury 197. 5. 2 proportionals of chloride of potassium 142. 1 proportional of peroxide of mercury 205. 1150. When solution of ammonia is poured upon calomel, protoxide of mercury, and muriate of ammonia, are the results; but ammonia, added to a solution of corrosive sublimate, occasions a white precipitate of a triple muriate of ammonia and mercury. A compound of this kind has long been used in pharmacy, under the name of calx hydrargyri alba, or white precipitate. The London Pharmacopoeia directs the following process for its formation. Take of oxymuriate mercury J lb. muriate of ammonia 4 oz. solution of subcarbonate of potassa pint. distilled water 4-pints. First dissolve the muriate of ammonia, then the oxymuriate of mercury, in the distilled water, and add thereto the solution of subcarbonate of potassa. Wash the precipitated powder until it becomes tasteless: then dry it. 1151. Muriate of ammonia renders corrosive sublimate more soluble in water, one part rendering five parts soluble in rather less than five of water. By evaporation a triple salt is obtained, formerly called sal alembroth. The addition of potassa or soda throws down the above-mentioned white precipitate. Hence its use in washing calomel. 1152. Chlorate of Mercury. --Chloric acid dissolves both the oxides of mercury; the protochlorate has the appearance of a yellowish granular powder,...
