Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: . commence to feed again. Most of them become full-fed towards the end of April or early in May, when they bury themselves and turn to pupae, the moths emerging towards the end of June or early in July. Remedial Measures. In gardens, stirring the surface frequently during the winter and spring destroys some of the larvae, and exposes others to Fig. XXI.--Larvae Of Great Yellow Undkrwing Moth. the attack of birds. Starlings are particularly fond of them. Handpicking the larvae is still more effective. I have entirely cleared them out of my own garden in this way. Fresh gas lime well worked into the land in the autumn has been tried with some amount of success. THE SILVER Y MOTH. Plusia gamma. Linn. Although this moth rarely commits any serious damage, I am giving a short notice of it, as it has been forwarded by so many correspondents. On the European Continent it has occasionally been known to appear in vast numbers, and do great damage to Sugar Beet crops. Life-history. The eggs are laid on the underside of the leaves of such plants as Cabbage, Beet, Pea, Bean, etc. The larvae hatch out in about fourteen days and commence feeding upon the leaves. When full-fed they are a delicate green, with short almost colourless hairs, and have six white wavy lines running down the back. At each side of the body is a yellowish and more conspicuous stripe, with an indistinct, broken line below...
